**ICD-10 CAUSE-OF-DEATH LISTS FOR TABULATING MORTALITY STATISTICS
(Updated October 2002 to include ICD codes for Terrorism Deaths (2001) and
WHO updates to ICD-10 (2003))**

I. INTRODUCTION

A. Purpose of This Manual

This manual presents the lists of causes of death for tabulation and dissemination of mortality data by the National Center for Health Statistics (NCHS) under the Tenth Revision of the International Classification of Diseases (ICD-10) recommended by the World Health Organization (WHO)(*1*). NCHS began using this manual for data year 1999. A total of eight (8) tabulation lists are described. Seven (7) of the lists are used for both underlying and multiple causes of death, and one for multiple causes of death only.

The tabulation lists in this report have been developed to maintain continuity with the lists from the Ninth Revision of the International Classification of Diseases (ICD-9)(*2*); to facilitate trend analysis; and to separately identify causes of death that are of public health and medical importance.

Periodically, NCHS Instruction Manuals are updated in order to correct errors and to reflect needed modifications dictated by changes in medical science, statistical practice and processing technology. **This update represents the fourth to the lists that are used by NCHS to present mortality data and include the addition of ICD-10 codes for Terrorism Deaths for data year 2001 and WHO updates to ICD-10 for data year 2003.** States and other federal agencies and organizations using the NCHS lists should incorporate these changes as soon as possible. All changes listed in the "Notices of Change" have been incorporated into this updated version of the manual (see Appendices A-D).

B. Changes from the WHO Tabulation Lists, Ninth Revision

The WHO tabulation lists of ICD-9 have been replaced in ICD-10 by more detailed lists of two types; condensed and selected. The condensed lists are the *Mortality Tabulation List 1, General mortality, Condensed list* (Table H) and the *Mortality Tabulation List 3, Infant and child mortality, Condensed list* (Table J). These lists provide categories for each ICD chapter and also, within most chapters, identify the categories of the selected lists together with residual categories entitled "Remainder of ...", which complete the coverage of the respective chapter.

Mortality Tabulation List 2, General mortality, Selected list (Table I) and *Mortality Tabulation List 4, Infant and child mortality, Selected list* (Table K), contain categories within most ICD-10 chapters for conditions and external causes significant for monitoring and analyzing population health status and mortality-related health concerns at both national and international levels. Chapter totals are not provided and only a few chapters have residual rubrics that enable such totals to be obtained.(1)

The four WHO lists from ICD-10 can be constructed from the NCHS tabulation lists by combining selected categories.

C.   Methodology

The ICD-10 mortality tabulation lists were created by a team of health statisticians and medical officers following several steps. First, a complete one-to-one mapping of each category at the 4-digit level of both ICD-9 and ICD-10 was completed to identify the structure of ICD-10 and to highlight changes from ICD-9. The mapping indicated that many categories were subdivided into multiple codes in ICD-10 and that other codes in ICD-10 did not match any ICD-9 codes. Second, the ICD-10 codes were aggregated into groups that were most comparable with ICD-9, except when medical or public health requirements and concerns warranted new combinations or groups of codes. The current ICD-9 tabulation lists were used as a starting point to create the ICD-10 tabulation lists. Third, draft lists were sent for review to key federal and state health agencies for comment. The comments and suggestions were analyzed carefully to make decisions on which causes or cause groups should be included in the final tabulation lists.

D.   NCHS Lists

Eight mortality tabulation lists are described: 1) the List of 358 Selected Causes of Death (Table A); 2) the List of 113 Selected Causes of Death (Table B); 3) the List of 130 Selected Causes of Infant Death (Table C); 4) the List of 39 Selected Causes of Death (Table D); 5) List of 124 Selected Causes of Fetal Death (Table E); 6) the List of Motor Vehicle Accident Deaths (Table F); 7) the List of Injury, Poisoning and Certain Other Consequences of External Causes (Table G); and 8) the Each Cause List.

‣   The **List of 358 Selected Causes of Death** (Table A), either directly or by combining multiple titles, can recreate the 103 categories in the WHO *Mortality Tabulation List 1* and the 80 categories in *Mortality Tabulation List 2*. The List of 358 Selected Causes of Death is similar to the List of 282 Selected Causes of Death in ICD-9.

‣   The **List of 113 Selected Causes of Death** (Table B) was constructed in part by combining certain titles in the List of 358 Selected Causes of Death. It is used for

the general analysis of mortality and for ranking leading causes of death. It is similar to the List of 72 Selected Causes of Death in ICD-9.

▸ The **List of 130 Selected Causes of Infant Death** (Table C), which is used for the analysis of infant mortality and for ranking leading causes of infant death, shows more detailed titles for Certain conditions originating in the perinatal period and Congenital malformations, deformations and chromosomal abnormalities than any other list except the Each Cause List. It is similar to the List of 61 Selected Causes of Infant Death in ICD-9.

▸ The **List of 39 Selected Causes of Death** (Table D), which is used to show mortality data for geographic areas, was created by combining titles in the List of 113 Selected Causes of Death. It is similar to the List of 34 Selected Causes of Death in ICD-9.

▸ The newly-introduced draft **List of 124 Selected Causes of Fetal Death** (Table E) is used to tabulate cause of fetal death; the structure of the list parallels that of the List of 130 Selected Causes of Infant Death.

▸ A special **List of Motor Vehicle Accident Deaths** (Table F) is designed to maximize comparability with ICD-9 lists for trend comparisons. This is necessary because the ICD-10 categories for motor vehicle accidents differ substantially from those in ICD-9. In ICD-9 the focus of the motor vehicle accident section was on the nature of the accident, whereas in ICD-10 the focus is on the victim and the type of vehicle involved in the accident.

▸ The **List of Injury, Poisoning and Certain Other Consequences of External Causes** (Table G) is used for tabulating the ICD-9 equivalent of Nature-of-Injury codes. It is derived from Chapter XIX of ICD-10, *Injury, Poisoning and Certain Other Consequences of External Causes*. These categories are used for tabulating multiple causes of death, **NOT** underlying cause of death. For Chapters I to XVIII and Chapter XX of ICD-10, the same tabulation lists are used for both underlying and multiple causes of death.

▸ The **Each Cause List** is made up of each 4-digit category in ICD-10 that is to be used for underlying cause-of-death classification (codes only, Table L). The Each Cause List --with titles and codes-- is not included in this manual, but will be published in Vital Statistics of the United States, 1999, Volume II, Part A, Mortality (*3*) and will be available in electronic form on the Internet (http://www.cdc.gov/nchs/), and on request to the Division of Vital Statistics, NCHS.
The causes designated by the symbol # in Tables B, C, and E are eligible to be ranked as leading causes of death for the specified population and infant/fetal groups (*3,4*).

In addition to the NCHS lists and the WHO lists, this manual includes a list of ICD-10 category codes that are to be used for underlying cause-of-death classification (Table L), a list of ICD-10 category codes that are not to be used for underlying cause-of-death classification (Table M), a list of the category codes not used in ICD-10 (Table N), and a list of changes to ICD-10 codes (Table O).

Instruction Manual Part 9
ICD-10 Cause-of-Death Lists for Tabulating Mortality Statistics

The United States has instituted new categories for the classification and coding of terrorism deaths. The events of September 11, 2001, necessitate modifications to ICD-10 for coding cause of death. The ICD, developed by WHO, has no explicit categories for terrorism, which are required to facilitate coding, processing, dissemination, and analysis of these events. NCHS has developed a classification within the framework of ICD that can be used to identify deaths associated with terrorism. The new terrorism codes will parallel the current ICD-10 category "Operations of War" in Chapter XX. The terrorism ICD-10 codes are placed in the "U" Chapter of ICD-10 which has been reserved for future additions and changes and for possible interim classifications to solve difficulties arising at the national and international level between revisions. The new terrorism codes are *U01-*U03, and will be included within the categories of homicide and suicide. The asterisk (*) in front of the codes indicates that the code was introduced by the United States, but is not officially part of the WHO's ICD. The changes to the tabulations lists below incorporate these new codes and are considered valid codes for the data year 2001. Additional information on the new terrorism codes can be found at: http://www.cdc.gov/nchs/about/otheract/icd9/terrorism_code.htm

NOTICE OF CHANGE - Con.

Also, the WHO has updated ICD-10 with seven (7) new codes, while at the same time deleting four (4) current codes. These new codes will be implemented in data year 2003. These changes are documented in Table O of this manual.
